

# CapaInstaller

## Configuration Management

Version 5.6

CapaInstaller is designed to fit into any organization's network structure. Any number of management servers can be established, on almost any Microsoft operating systems, and on almost all hardware. This enables deployment in large, multi-site environments without overloading the network, interrupting high priority traffic or inconveniencing users.

### Package Management

CapaInstaller Configuration Management includes all of the tools you need to create software installation packages that will install correctly, even when distributed to computers with widely varying hardware and software configurations.

Streamline your package creation process by using CapaInstaller Package Creator, which generates scripted installation packages that deliver success rates as high as 99-100%, even in complex, heterogeneous environments.

### CapaInstaller Package Creator

Using the CapaInstaller Package Creator will bring a shorter and more structured development cycle of software packages. The Package Creator has been integrated with various setup formats making it a very versatile tool for packaging.

Packages are based on the media (software), an installation procedure and a un-installation procedure. The (un)installation procedures are based on the CapaInstaller Scripting Language which is a VBScript extension.

### Software Catalog

Not all software installations are mandatory. You can therefore mark optional packages to be listed in a catalog rather than installed automatically. Users can review the catalog at any time and use it to select and install whatever software they need. Each catalog item can be made available to all users or restricted to specific groups.

### Real-time reports

Query & Reporting makes it possible to create new reports based on any type of data, or to use some of the predefined reports. By choosing precisely which data to include, using both static and/or dynamic criteria, each report can be extremely concise and focused. CapaInstaller integrates with Microsoft SQL Server Reporting Services, which makes it possible to view the reports in a browser without even having CapaInstaller installed.

### Mobile Device Management

Management of mobile devices is seamlessly integrated in CapaInstaller and offers centralized management of policies that controls configuration and restrictions of Apple iOS, Apple macOS and Android based devices. The solution enables the IT Department to take control of users' mobile devices using the same management console as used for Windows computers.

### Power Management

With the Power Management feature you can minimize the client's power consumption, by setting up specific rules that determine when the client's in your organization should turn off, go to sleep or the like. It is possible to manage the clients in different groups with different work habits, so that the Power Management does not interfere with the work of the end-user.

### Microsoft Gold Certified Partner

CapaSystems has been globally accredited as a Microsoft Gold Certified Partner.
