Best Practice
Software Packaging & VB Script

Do you want to know how to make packages for unattended installation? How to get started and which tools to use? If so, this course is ideally suited for you.

Course description
The course is directed at technical employees who are responsible for Client Management. Various installers will be described, especially the MSI-installer.

We will work with CapaInstaller Package Creator, a very powerful tool which distributes packages quickly and safely. We will go through a number of exercises, which show how to make packages quickly and make use of several hundreds of predefined and tested functions from CapaInstaller Package Creator. Focus will be on troubleshooting and the log files created from making packages with this tool.

The course is held as a hands-on course with practical exercises and assignments, which illustrate every day scenarios and teaches the course participants to choose the right procedures. Besides CapaInstaller Package Creator, the following tools will be covered: Orca, Installtailor, Processmonitor and ProcessExplorer.

It is a precondition that the course participants are acquainted with CapaInstaller. It is not a precondition to have participated in the course "CapaInstaller Foundation".

Furthermore course participants should have knowledge of:
- CapaInstaller Package Creator
- Standard template configuration
- Logs, location and configuration – simple trouble shooting
- VB Script

The course is held in Danish or English. Course material is in English.
If you want a customized course please contact us.
The course may take place on-site.
